

WHO WE ARE

It all started in 2007. We wanted to solve the problems with traditional sink installation methods.

Mila International was established to solve that problem – by creating the world's first and only flush-mount sink.

We are constantly innovating our manufacturing process and continue to develop new technologies in the kitchen and bath sectors to be the leader in the industry.

SOLVING THE AGE OLD PROBLEM

Since the introduction of stainless steel sinks, the sink mounting options were always limited to **under-mount** or **top-mount** installation.

Both options result in a range of problems from water seal maintenance to mold, mildew, and bacteria build-up in the gaps between the sink and under the countertop.

Mila international recognized the need for a better installation alternative that solves the problems caused by under-mounting or top-mounting, yet was practical and easy to install.

The Mila International **TRUE Flushmount Installation Sinks** are the solution.

UNDER-MOUNT

Mold and bacteria can build-up under the countertop

Unsightly caulking needs constant maintenance

Countertops chip over time from usage

DROP-IN

Gap between the countertop and the sink rim causes water seepage

Caulking eventually becomes dislodged creating a recurring maintenance issue

Sink rim creates a ridge that makes it difficult to clean
